

MUG-A-BUG

ULV Flushing Solution

Freight Description: Petroleum Distillates, N.O.S., 3, UN 1268, PG III

MUG-A-BUG ULV Flushing Solution is used for removing insecticide residues from ULV Chemical Applicators. It is formulated to be compatible with all ULV equipment, and its high flash point reduces hazards. It is non-residual, prevents clogging and dissolves all insecticides used in ULV equipment. MUG-A-BUG ULV Flushing Solution can be used in equipment with or without flushing systems and does not contain water or corrosives.

Directions for Use: The system must be flushed immediately after each use to protect the equipment from corrosive or abrasive materials in the formulation. Upon completion of the application with formulation, switch to the "flush" mode. Continue spraying for one minute after noticing a visible difference in output vaporization. Flushing solution is vaporized rapidly, and is not visible for near as long as most oil-based formulations. Corrosive materials, such as Malathion, should be flushed for several extra minutes. A total flush time is usually 3 to 5 minutes.

MUG-A-BUG ULV Flushing Solution contains a high flash point (100°) Solvent. The following are general safety precautions for handling any solvent type material:

- 1) Avoid contact with skin or eyes. Should contact occur, wash hands with soap and water. Flush eyes with water for 15 minutes. Contact a physician if irritation persists.
- 2) Have adequate ventilation. Do not breathe vapors.
- 3) Keep container closed. Do not pour, spill or store near heat or open flame.
- 4) Do not smoke while using this product. Do not pour, spill, store or otherwise handle this product near heat source or open flame.
